

Idera SharePoint audit™

IMPROVED SHAREPOINT AUDITING FOR SECURITY AND COMPLIANCE MANAGEMENT

Idera SharePoint audit is a comprehensive SharePoint auditing solution that captures logon events, views, inserts, updates, deletes, and changes all the way to the field level, to give you a complete view of who is doing what, and where, in your SharePoint environment. Idera SharePoint audit enables you to automatically turn on auditing for new SharePoint sites, configure specialized auditing at the web application or site collection level, and monitor the level of auditing across your farm. Collect the data you need to comply with regulations and data security requirements such as Sarbanes Oxley (SOX) and HIPAA.

WHY IDERA SHAREPOINT AUDIT?

With adoption of SharePoint on the rise, it is important from a compliance and governance perspective to track which users have been accessing the various resources stored in SharePoint. Idera SharePoint audit provides an easy way to enforce farm-wide auditing while still providing the flexibility to override these settings at the web application or site collection level.

In addition to enforcing audit rules, SharePoint audit fills in the gaps by making it possible to track authentication events (user logins), inserts of new items, and even changes to individual field values. In addition, it makes it easy to view, filter, and report on audit events.

PRODUCT HIGHLIGHTS

- Enhances audit data with inserts, authentications, and field-level changes
- Simplifies auditing administration across your SharePoint farm
- Easily identifies security events with out-of-the-box reports
- Helps with regulatory compliance and company security policies

KEY BENEFITS

Enriches SharePoint's audit data

Idera SharePoint audit enriches SharePoint's audit data with logon events, inserts, and field value changes, while tracking views, updates, and deletes.

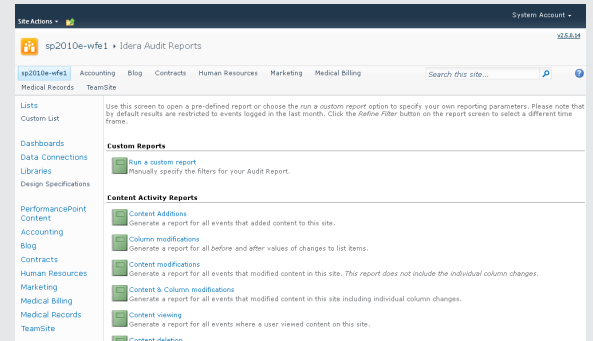

Saves time and ensures consistent auditing

Idera SharePoint audit ensures consistent auditing across the farm by enforcing audit policies on all servers and sites – new and existing.

Customizable settings at the web application and site collection levels

Idera SharePoint audit's unique, hierarchical, administration model enables farm-wide auditing configuration and overrides at lower levels of web applications and site collections.

idera™

Idera SharePoint audit extends SharePoint's auditing capabilities, providing complete SharePoint auditing for security and compliance management. It captures logon events, views, inserts, updates, deletes, and changes all the way to the field level, to give you a complete view of who is doing what, and where, in your SharePoint environment.

SYSTEM REQUIREMENTS

SharePoint platforms

- Windows SharePoint Services (WSS) 3.0 SP1 / SP2
- MOSS 2007 SP1 / SP2
- SharePoint Foundation 2010 / Server 2010

Operating System

- Windows Server 2003 32 / 64 bit (including R2)
- Windows Server 2008 32 / 64 bit (including R2)

Repository Database

- Microsoft SQL Server 2005
- Microsoft SQL Server 2008 Enterprise, Standard, or Express Edition

Disk Space and Memory

- Recommended minimum 1.5GB of total memory per SharePoint server
- 5 MB disk space

SECURITY & COMPLIANCE

KEY BENEFITS (CONTINUED)

Enforces auditing policy

Idera SharePoint audit enforces auditing policy by monitoring the state of auditing on site collections. Audit monitor tells you where auditing is enabled or disabled, and what types of actions have auditing disabled on a given site.

Makes it easy to understand and respond to security events

Idera SharePoint audit's out-of-the-box and custom reporting make it easy to understand and respond to security events. Use one of SharePoint audit's reports, create your own, or filter and query the audit log viewer to get the information you need.

Helps comply with regulations, company security policies

Idera SharePoint audit gives you the tools to fulfill your SharePoint regulatory and compliance data needs, whether that's Sarbanes-Oxley (SOX), HIPAA, GLBA, Title 21 CFR Part 11, FERC, NERC, or others.

TECHNICAL FEATURES

- **Add to SharePoint auditing:** Idera SharePoint audit enriches SharePoint's audit data with logon events, inserts, and field value changes.
- **Control what you log:** SharePoint audit's fine-grained control over the type of events logged means that your audit logs won't grow out of control. Further manage the audit log size using automatic truncating.
- **Out-of-the-box and custom reporting:** SharePoint audit's out-of-the-box and custom reporting on information like content viewing, content modification, and content deletion.
- **View and filter audit log data:** SharePoint audit enables administrators and compliance professionals to view and audit SharePoint log data at any level. View logs from any list item's context menu.
- **Query audit data:** SharePoint audit enables you to query audit data at the farm, site collection, or list level and export logs to Excel as pivot tables for further manipulation.
- **All Microsoft:** SharePoint audit uses all Microsoft technology. It's a native .net application.
- **Lightweight and easy to deploy:** SharePoint audit has minimal server requirements, and is lightweight, fast, efficient, and easy to install. SharePoint audit stores its log data in a secondary database, eliminating any auditing impact on your SharePoint content database.
- **Compatible:** SharePoint audit is compatible with MOSS, WSS & SharePoint 2010, and it adds auditing functionality to WSS 3 & SPF2010.

Idera is headquartered in Houston, TX with offices in London and Melbourne.
