

Idera SharePoint migration manager™

Migrate and organize SharePoint content

Idera SharePoint migration manager enables you to efficiently manage your migration from or between SharePoint 2003 or 2007 and to SharePoint 2010. It also enables you to intelligently move or migrate content within versions of SharePoint in order to better structure your SharePoint environment. You can move or copy content between SharePoint servers and bulk load files into SharePoint while retaining critical content characteristics such as document properties, column values and version history. Includes Idera's SharePoint content organizer, enabling you to organize as you migrate.

WHY IDERA SHAREPOINT MIGRATION MANAGER?

Most SharePoint migration products are "project based", designed for one-time use on a migration project and priced to include onsite services. Idera SharePoint migration manager is designed to be used over and over again, with no services required, in a wide variety of scenarios including site consolidation, farm or site reorganization or rolling out new sites with applications from development. It also contains Idera content organizer enabling you to organize your content as you migrate, reducing the time and cost of migration projects.

PRODUCT HIGHLIGHTS

- Quickly migrate sites, lists, folders, list items all the way down to views, permissions etc...
- Import files directly from file systems
- Change content type and column values during migration
- Retain important metadata information during migration
- A single solution for migrating across or within SharePoint 2003/2007/2010/BPOS

KEY BENEFITS

Intelligent migration:

Intelligently copy entire sites, lists, libraries, folders or individual items between SharePoint site server farms for consolidation, upgrade, or compliance purposes.

Migrate selected items:

Migrate and copy multiple items between folders, lists, sites or servers simultaneously.

Organize during migration:

Migration manager includes Idera's SharePoint content manager, enabling you to organize as you migrate. Change or keep content types and column values during migration, retain version history, and automatically assign values to mandatory columns.

Bulk load documents from file system directly into SharePoint:

Load files and folders from file systems to SharePoint libraries in bulk while assigning content types and column values.

Create reusable migration templates:

Save rules for column mapping as templates for future re-use.

TECHNICAL FEATURES

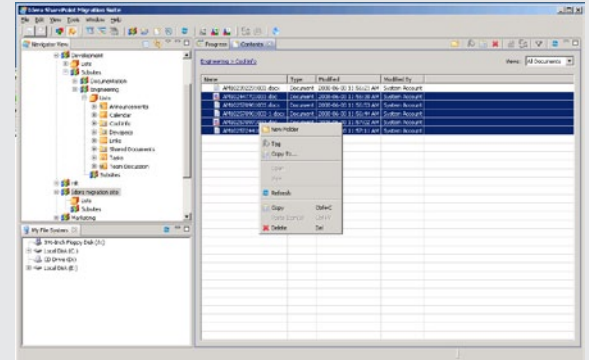

- **Easy to use interface:** Familiar Windows Explorer-type interface supports drag-and-drop, multiple windows and more.
- **Bulk migration:** Intelligently migrate content or entire lists, libraries, sites and site collections between any site, server or farm.
- **File system:** Load files from network shares and local drives into SharePoint libraries in bulk while assigning them content type and column values. Map values from folder names or file system properties such as Created At, Owner, Title, Subject, etc. to SharePoint fields. You can even remove folders structures during import in one step. No more editing field values for each individual document in SharePoint.
- **No server side installation:** All operations are performed using SharePoint web services. No requirement to install services, add-ons or agents on the SharePoint server.
- **Supports multiple SharePoint versions:** Provides complete support for migration across and within SharePoint 2003/2007/2010/BPOS and other hosted SharePoint providers.

SYSTEM REQUIREMENTS

- 32-bit Windows 2000 SP4, Windows XP SP2, Windows Server 2003 SP2, Windows Vista, Windows 7, and Windows 2008
- 64-bit Windows 2003 SP2, Windows XP SP2, Windows Vista, Windows 7, and Windows 2008
- Monitor capable of displaying 16 bit color or greater and a resolution of 1024x768
