# What is SQL Secure?

IDERA SQL Secure helps to identify vulnerabilities in SQL Server security and ensure compliance with increasing audit requirements. SQL Secure collects and analyzes permissions data from SQL Server and Active Directory as well as the file system and registry to show who has access to what database objects and how that access is granted. This powerful tool also monitors changes made to access rights so that unwanted changes can be easily identified and fixed. With SQL Secure you can also see proactive recommendations to improve server security based on an evaluation of key security settings and audit rules within SQL Server.
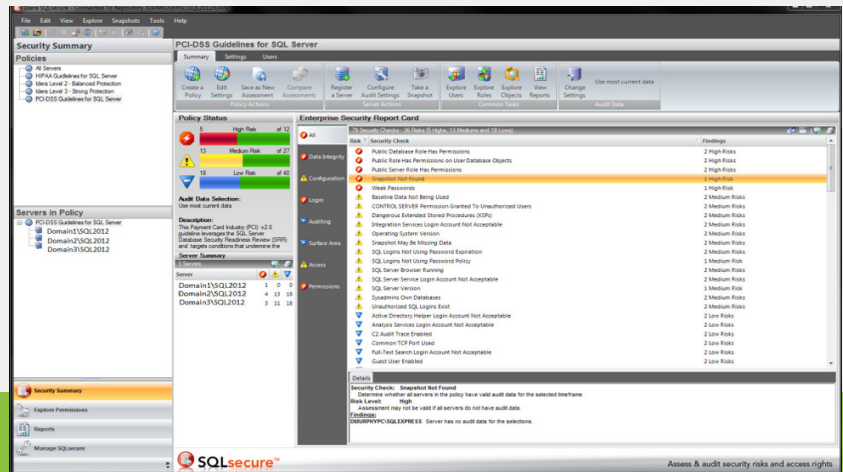

> SQL Secure has saved me a ton of time answering questions for auditors and even more time when they change the scope of what they are looking for! It is really important in the financial industry to determine who has access to what but more importantly through which channels. With SQL Secure I don't have to manually get those answers.

> **— Sr. DBA** Phillips, Hager & North Investment Management

> As a member of the Healthcare community, we are investing significant resources to insure that the personal health information from our members is secure. SQL Secure can give us that ability right out of the box! It allowsus to monitor data access and detect possible security gaps before they are exploited. When fully utilized, SQL Secure will greatly assist us in going beyond meeting HIPAA requirements and giving our clients full confidence in our ability to maintain full confidentiality of their data.

> In a nutshell, IDERA's products for SQL Server make my life easier and allow me to dedicate more time to other parts of my job. Specifically, SQL Secure automates user permission analysis — a job that can be very time-consuming. It tells me at a glance what access a particular user has. Via filters and audits, I can easily keep track of changes to objects, permissions, logins, and group members.
